

Pedagogy Overview: Word Study

What is Word Study?

Word Study is the knowledge and recognition of the reliable and recurring patterns in spoken and written language. These patterns include grapheme-phoneme correspondence, syllable types, syllable division and spelling rules, as well as prefixes, suffixes, roots and combining forms.

Words that do not follow reliable phonics patterns (known as sight words) can be learned and practiced through repeated exposure.

How do Word Study skills impact reading proficiency?

Word Study skills help students develop accuracy and automaticity so they can focus their cognitive resources on deriving meaning from what they read. By practicing and memorising recurring letter patterns, students learn to automatically recognise words containing those patterns on the first encounter. This instant word reading, also called automaticity, leads to fluent reading.

Knowledge of word parts, such as prefixes, suffixes, roots and combining forms, integrates word study and comprehension. When students are familiar with Latin and Greek-derived morphemes that are often found in subject-specific vocabulary, they are better able to access information in academic texts.

Perhaps most valuable, word study skills foster the enjoyment of reading. When reading is automatic, students read more, acquire new vocabulary, expand their world knowledge and further develop their comprehension skills, all of which positively impact reading proficiency.

How does Lexia® PowerUp Literacy® develop word study skills?

Through structured and systematic activities, **Lexia PowerUp Literacy** teaches students to accurately and automatically read multisyllabic words. The goal of word study is to develop accuracy, automaticity and fluency in reading by focusing on the reliable and recurring patterns in spoken and written words. In the Word Study strand, Lexia PowerUp Literacy systematically advances students' knowledge of patterns in English through spiralled learning.

Pedagogy Overview: Word Study

In the Foundational levels, PowerUp Word Study activities build phonological awareness while also developing sound-symbol knowledge for consonants, digraphs and short vowels. Students develop an awareness of sound and syllable patterns and apply this knowledge to reading and spelling.

As students progress through the Intermediate and Advanced levels of the Word Study strand, they learn rules for syllable division and spelling rules, as well as Latin and Greek-derived morphemes. Students practise letter-sound patterns in the context of multisyllabic words similar to those they will encounter in curriculum texts for a wide range of subjects.

PowerUp instructional materials, such as Lexia Lessons and Skill Builders, further strengthen newly acquired phonics patterns and word analysis skills. These resources reinforce online learning by providing authentic reading and writing experiences that build decoding skills, promote accurate and automatic word recognition, and boost student motivation and confidence.
